

GATEKEEPER

OPTICAL TURNSTILE
CONTROL & MONITORING SOFTWARE

SECURITY SOFTWARE

alvaradomfg.com

GateKeeper is a simple, reliable software program that allows Alvarado's optical turnstiles to be configured, monitored, and administered using a standard Windows PC.

GateKeeper replaces traditional switchboard control panels with a PC application that allows Alvarado optical turnstiles to be monitored and controlled remotely from a single desktop PC.

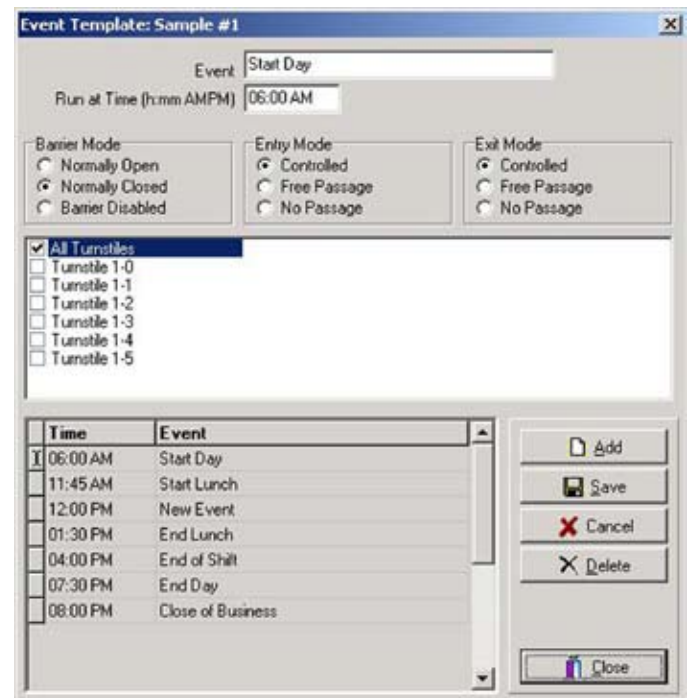

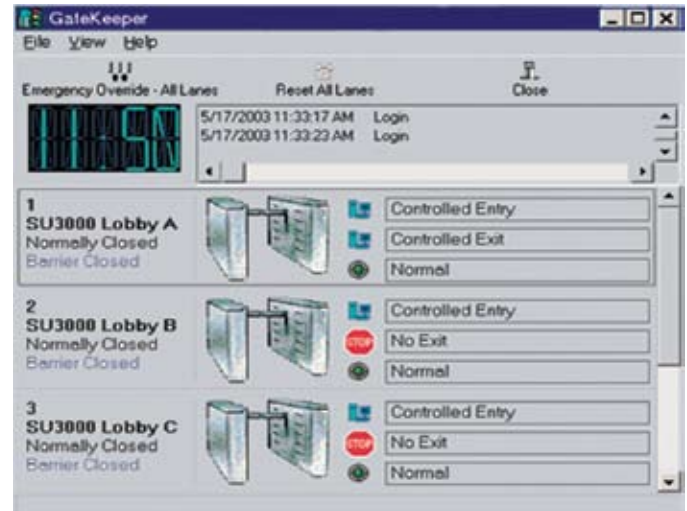

GateKeeper allows control of virtually all day-to-day operational functions, including designating a lane as entry or exit, opening or closing a lane, or allowing passage overrides. The application also provides immediate visual and audio notification of alarm conditions. It tracks all attendant and alarm activity and a log may be printed or saved for record keeping purposes.

In addition to day-to-day activity, GateKeeper permits those with higher permission levels to configure turnstile settings, such as alarm types and duration, turnstile reset times (if a badge is scanned but no one passes), and tailgate sensitivity.

The application provides three levels of security (Administrator, Supervisor and Operator), and has login requirements.

GateKeeper also includes a built in Event Scheduler. This extremely useful tool allows day-to-day operational functions to be scheduled and automatically implemented without the need for a guard or attendant to "remember" to change settings.

Event Scheduler allows operation templates to be saved and then automatically implemented at user defined times. Examples include changing the entry status of lanes (entry, exit, bi-directional control or free passage) at set times of the day. Similarly, a facility may want barriers activated or disabled at select times and/or only specific lanes operational on weekends and holidays. Event Scheduler allows Alvarado's optical turnstiles to seamlessly integrate into a customer's operational requirements.
