

# GATEKEEPER

## Turnstile Activities Management

GateKeeper is an optional, easy to use software for exclusive use with Alvarado turnstiles. This flexible TCP/IP-based application works in addition to an existing access control system, and controls and monitors Alvarado optical turnstiles from any device on the facility's wired or wireless network. Using GateKeeper eliminates the need for a standalone desktop control panel.

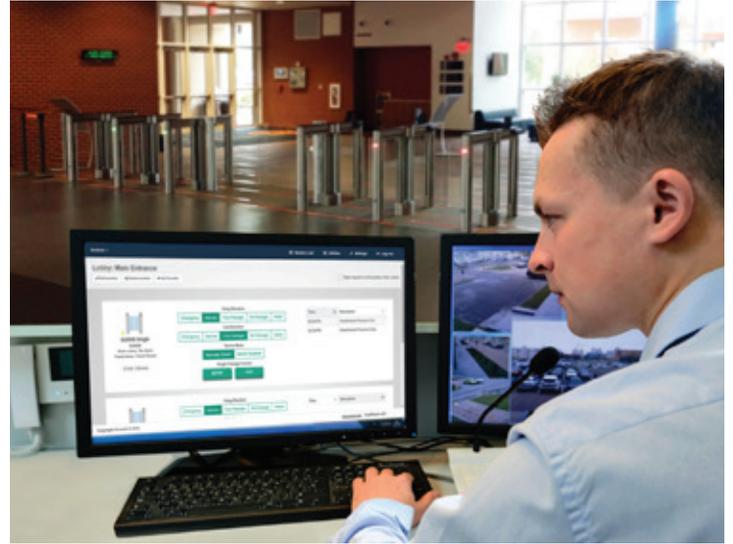

### Product Features

- TCP/IP communication
- Immediate visibility of alarm conditions
- Automated configuration changes / event management
- Browser-based software runs on desktops, laptops & mobile devices

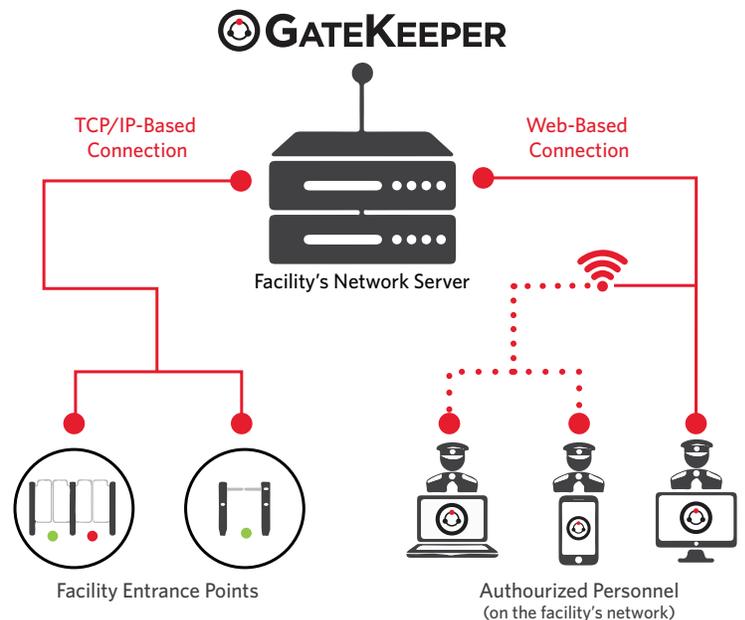

### Gatekeeper Provides

- Visual notification of turnstile status
- Visual notification of alarm conditions
- Immediate implementation of operational mode changes to individual or all turnstiles
- Simple method to implement user and visitor passage overrides
- A historic database of turnstile activity

### Event Scheduling

GateKeeper also includes an automated configuration scheduler that allows the facility to automatically implement turnstile configuration changes based on date and time. Using the event scheduler, the facility can do such things as automatically change turnstile operational modes, lock down turnstiles, etc.

Additional resources, including specifications, installation manuals and drawings can be found online.
