

LGB

Retail Pedestrian Gate

The LGB is a highly versatile latching gate that opens in one direction and stays open, until manually closed. The gate has a reversible finger latch that allows field configuration of the gate swing direction. The LGB is often installed in conjunction with our turnstiles and modular posts and railing.

Product Features

- Closes off sensitive or restricted areas
- Can open from the right or left side
- Integrates with Alvarado turnstiles, posts and railing
- Can be locked using a small padlock

Common Uses

Whether your goals are to direct pedestrian traffic, control shopping cart flow, block or segment areas of your facility – or all of the above – our pedestrian gates, turnstiles and modular posts and railing are inexpensive and flexible tools to help you achieve your objectives.

Our experienced sales and customer service personnel have years of real world experience and are available to assist with ideas, options, layouts and answers to your questions.

Function

The LGB hinge post and gate are welded assemblies with a bright chrome finish that matches the finish on our chrome turnstiles and modular post and railing.

The gate opens smoothly and stays open until manually closed. The LGB does not have a self-closing mechanism. Upon closing, the latch finger on the gate recesses into the latch holding the gate into the closed position until the latch is manually released and the user opens the gate. If desired, the LGB can be locked in the closed position through use of a small padlock.
