

## Secured Access Control:

Facility Perimeters

## RECOMMENDED PRODUCTS FOR FACILITY PERIMETERS

### FULL HEIGHT TURNSTILES

Alvarado is the leading manufacturer of full height turnstiles. Our solutions offer a highly secure point of entry and reduce the need for nearby guard staff. Facilities can control who has access to the site and fully eliminate unauthorized entry attempts by easily integrating with the access control system. Units are fully designed for exterior applications, are easy to install, highly reliable, and are designed for long term continued duty use in any environment.

### TOUCH-FREE FULL HEIGHT TURNSTILES

Alvarado's full height turnstiles are available in motorized, touch-free versions, providing a smooth, secure and completely contactless passage for users. Existing full height installations can be converted to motorized, touch-free operation in the field. Contact an Alvarado sales representative for more details.

### TANDEM FULL HEIGHT TURNSTILES

Alvarado's tandem full height turnstiles offer the same security features as our single models while providing a more compact installation footprint compared to two single units.

### PEDESTRIAN GATES

Alvarado's full height gates have a large 48" passage width and are often installed in conjunction with full height turnstiles to provide passageways for accessibility or material deliveries. The individual frame and gate are welded assemblies and the various models provide several lock and push bar options. Gates ship fully assembled for easy installation.

## SAFETY FEATURES

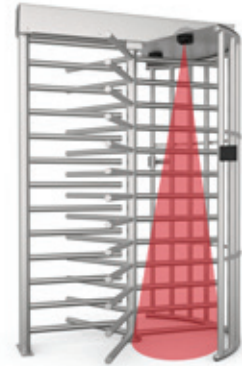

Built-in speed control, anti-entrapment design, free egress in emergencies, and optional heel / arm guards are just a few of the features that ensure all of Alvarado's full height turnstiles provide safe and secure operation.

## CUSTOMIZATION OPTIONS

With over a dozen customization options, Alvarado's full height turnstiles stand out in both form and function. Options vary by model and include:

- Galvanized, power coated and stainless-steel finishes
- User notification lights
- Turnstile open/closed status lights
- Card reader attachment plates
- Enhanced weatherization protection
- Padded heel / arm protective sleeves

## Facility Perimeter Applications

### EASY INTEGRATION

Integrating a full height turnstile into your facility is quick and easy. Our full heights integrate with virtually any access control or visitor management system and accommodate a wide array of credential readers. A dedicated fire system input is provided, and passage outputs can be monitored to validate passage after activation. The result is a full height turnstile that thousands of facilities worldwide rely upon for superior access control and visitor management.

### THE ALVARADO ADVANTAGE

#### SUPERIOR CONSTRUCTION

Unlike competitive models that bolt individual parts together during installation, the integral sections of our full height turnstiles are delivered fully welded, creating a solid and secure product that will stand the test of time. Both our manual and electric lock control versions are richly appointed with standard features that are expensive options on competitor products. All single and tandem models are UL listed, meet CSA standards and are CE marked.

#### ASSEMBLED AND SHIPPED FROM THE U.S.A

Alvarado's full height turnstiles are assembled and shipped from our Southern California headquarters, allowing for the fastest standard lead times in the industry. For rush requirements, even shorter turn-around times are available.
