

Secured Access Control: Recreation and Wellness Centers

RECOMMENDED PRODUCTS FOR RECREATION AND WELLNESS CENTERS

OPTICAL TURNSTILES

Alvarado optical turnstiles are a functional and attractive addition for any recreation center. When a valid credential is presented, the turnstile's motorized barriers open, allowing for a single passage. Integrated optic sensors detect unauthorized users attempting to piggyback on a valid entry. The turnstile supports several operational modes, including "free exit" – which opens the barriers automatically when patrons leave the facility. All models are available in ADA compliant passage widths.

"After two years of heavy use the Alvarado [SU5000] turnstiles have required almost no maintenance...Our staff is grateful to have this high tech solution that does not require frequent repairs... Personally, the Alvarado turnstiles have surpassed my expectations."

- Krista Smith, Director of Recreation at Cal Poly Pomona

WAIST HIGH TURNSTILES

Waist high turnstiles have rotating barrier arms. In addition to traditional models, Alvarado also offers a motorized three-arm turnstile. After credential validation, the arms automatically rotate with just a touch of the horizontal arm by the user. Like our optical models, Alvarado waist high turnstiles are extremely durable.

PEDESTRIAN GATES

Pedestrian gates provide stroller, wheelchair and delivery access. Alvarado makes both motorized and non-motorized gates and has years of experience helping our customers design entry layouts that accommodate disabled users as well as package and equipment deliveries.

MEMBERSHIP SOFTWARE INTEGRATION

Alvarado turnstiles integrate easily with access control or visitor management systems. Alvarado has integrated with dozens of systems, including the widely used Fusion Visitor Management System.

"Connecting Fusion with Alvarado turnstiles is very straightforward. Fusion uses cost-effective, industry-standard control boards that connect with the turnstiles via a simple dry contact interface. To open the turnstile, Fusion sends an "open" command after access privileges have been verified. The technology used allows Fusion to connect with any Alvarado turnstile model."

-JP Parrish, Manager of Training and Support, InnoSoft Fusion

BENEFITS OF ACCESS CONTROL TURNSTILES

IMPROVED THROUGHPUT

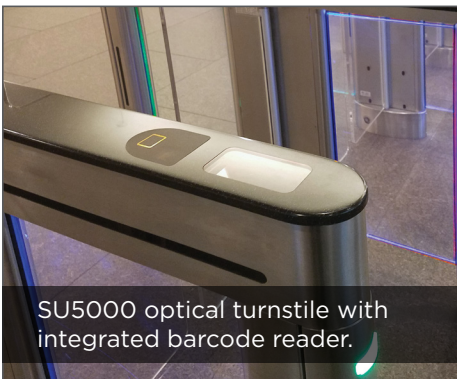

When turnstiles are part of the entry process guests present their valid credential directly to the turnstile to gain facility access. Reducing attendant involvement in the entry process speeds throughput and frees attendants to perform other duties.

IMPROVED SECURITY

With physical barrier security there are far less opportunities for members to enter without validating their entry credential or for visitors to enter without checking in. Alvarado optical turnstiles provide additional security through the use of advanced optical detection, which provides notification when tailgaters attempt to follow an authorized user through the passage area.

CREDENTIAL READER INTEGRATION

Alvarado has integrated dozens of different reader types into its turnstiles. Whether you use biometric, RFID, magnetic stripe or barcode, we can provide an attractive solution that will be convenient for your users.

SU5000 optical turnstile with integrated barcode reader.

SU5000 optical turnstile with front mounted reader.

Adjustable angle mounting attachment often used with larger readers.

CUSTOMIZATION OPTIONS

Alvarado turnstiles offer many customization options. Cabinets can be powder coated in any color and alternate lid colors are available. Other options include etching of logos onto the panels and side panel illumination.

Panel Etching
