ALVARADO

protecting assets and controlling the flow of people

model TAS12-AS2

The TAS12-AS2 is an intelligent admission station consisting of two barcode scanners, color TFT touchscreen displays, and an advanced controller that communicates with Alvarado server based gate admission software via TCP/IP. One scanner & touchscreen faces the patron. A second faces the attendant.

The TAS12-AS2 is used for patron self-scanning entry / exit validation, or attendant assisted entry applications where it is beneficial to provide an operator a dedicated barcode scanner and touchscreen control. Typical examples of attendant assisted applications include family and disabled entry areas, where biometric validation devices are used, or where multiple entries are associated with a single credential (group entry).

Through the addition of an optional relay, the admission station can activate (unlock) an adjacent turnstile or gate.

COMMON APPLICATIONS

- Front Gate Entry Control
- Patron Self Scanning
- Attendant Assisted Entry

Why Alvarado?

Alvarado is the leading provider of front gate solutions and integrated software for sports and entertainment venues. Founded in 1956, Alvarado has supplied best-in-class admission control hardware, software and integrated solutions to venues around the world. Our superior product quality, integration expertise and industry leading service and support are just a few reasons that many of the world's most respected companies use our products again and again.

INTELLIGENT ADMISSION STATION

KEY POINTS

Media Validation	Validates 1D/2D barcodes (tickets / cards / print-at-home / cell phone). Additional media readers such as magnetic stripe, NFC, RFID and fingerprint can be integrated.
5.7" Color TFT Patron Display	Bright (700 nit) touchscreen display is visible in direct sunlight. User definable graphics notify of credential status. Advertisements can also be displayed. Graphics are easily changed using an Alvarado server utility.
5.7" Color TFT Attendant Display	Bright (700 nit) touchscreen display is visible in direct sunlight. User definable graphics notify of credential status. Graphics are easily changed using an Alvarado server utility.
Touchscreen	The displays supports multiple functions including attendant sign on, media look up and custom developed functionality.
Attendant Notification	Bright LED array notifies attendant of presented credential status.
Custom Audio	Plays user definable sounds (.wav files) that can be associated with presented credential status. Audio is changed using an Alvarado server utility.
Server Communication	Communication via wired or wireless TCP/IP with Alvarado's server based gate admission software.
Access Device Control	Through the addition of an optional relay, the admission station can activate (unlock) an adjacent turnstile or gate.
