

# Suite Access Control

The IntraQ-X Suite Scanner is a compact, wall-mounted terminal that unlocks electrically-controlled doors upon presentation of valid entry credentials. Among its many features, the IntraQ-X includes customizable LED accent illumination to coordinate with facility color schemes and graphics to provide an intuitive experience for VIP guests.

## Benefits:

- Allows guests to self-validate credentials
- Fast and reliable validation
- Attaches directly to a wall and comes standard as a PoE+ device
- Perfect for access to suites / other restricted areas

## Features:

-  **Media Validation** . . . . . Validates almost any digital or printed media type, including mobile phone barcodes and RFID/NFC passes
-  **Bright TFT Display** . . . . . Color display provides visual instructions for guests; touchscreen interface allows operator to access administrator functions
-  **Custom Graphics/Audio** . . . . . Highly customizable graphics, sounds and LED accent lighting to match any decor, sports team color or individual event
-  **PoE+ Device** . . . . . Power and network communication in one ethernet connection

### IntraQ-X: A Great Guest Experience

The IntraQ-X suite access terminal is the perfect solution for securing access to luxury suites, club seating and other exclusive areas in sports and entertainment venues. Combining security with a quick and easy method of entry for guests, the IntraQ-X allows suite doors to remain locked until a guest scans a valid credential, unlocking the door.

### Typical Installation Sites

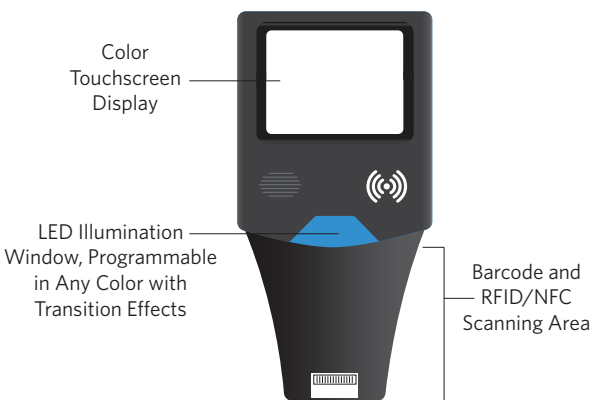

- Stadiums and arenas
- Performing arts centers
- Exclusive and VIP areas

### Available Options

- Add RFID / NFC reader

### Ticketing System Integration

The IntraQ-X works seamlessly with Alvarado's widely used GateLink10 admission control software or, using our DirectConnect API, the IntraQ-X can directly communicate with third-party systems.

### GateUtility

Alvarado's IntraQ-X comes with our highly convenient GateUtility device management application. This browser-based application allows authorized users from a desktop, laptop, tablet or smart phone to:

- Control the LED illumination window to:
  - Display a static color in virtually any color while idle
  - Transition between up to any of three colors while idle
  - Select between several transition styles
  - Turn the illumination window green/red based on valid/invalid scans to reinforce screen graphics
- Unlock / relock suite doors
- Change display graphics and audio sound files
- Download software updates and restart devices

GateUtility allows the user to address individual devices, devices in a section or area, or all installed devices.
