

Contactless Entry Pedestal

With Integrated Temperature and Mask Detection

A true game changer, the industry-proven IntraQ Portable Pedestal offers venues contactless self-scanning and integrates with third party temperature sensing and/or mask detection devices.

Benefits:

- Allows venues to monitor guest temperatures and verify masks while maintaining social distancing guidelines
- Allows guests to self-scan printed and mobile access credentials, minimizing close interaction with staff
- Frees ticket takers to perform valuable customer service functions
- Eliminates touching/contact during entry process through flexible scanning options
- Battery powered/Wi-Fi communication
- Portable and easy to move/re-position based on crowd volume and venue needs

THERMAL SENSING
Screens in <2 seconds from up to 18 inches away with accuracy ± 0.3 °C

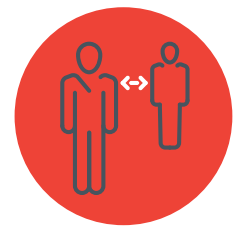

MASK DETECTION
Detects if user is wearing a mask and reacts accordingly

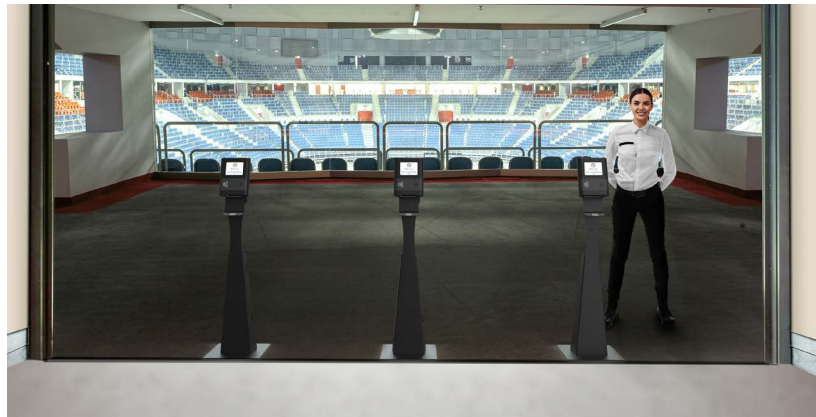

FACIAL RECOGNITION
Optional biometric facial recognition in <1 second. Includes anti-spoofing against photos and videos

AUDIO & VISUAL ALERTS
Gives clear notification when a facility's mask and temperature guidelines are not met

EASY DISTANCING
Wireless and battery powered pedestals are easily spaced to meet social distancing guidelines

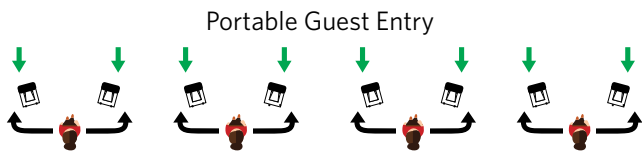

Contactless and Mobile Access Control

When a guest is screened and approved based on the facility's temperature and mask guidelines, the IntraQ allows the guest to self-scan credentials for entry. If the temperature falls above the facility's approved range or no mask is detected, an attendant will be notified and the IntraQ will not accept credentials.

The IntraQ Portable Pedestal uses Wi-Fi communication and provides up to 20+ hours of normal operation on a full battery charge. With its uniquely designed portable dolly with bracket and handle, the IntraQ can be easily moved and re-positioned to meet venue and crowd requirements before, during and after events.

Reduced Staffing Requirements

A single staff member can monitor pedestals while also being more observant of surroundings. The IntraQ can also display custom messages to guests as they enter and/or free up staff to perform other safety measures (i.e. temperature checks) if necessary. In the example below, staff members can monitor multiple portable pedestals from a distance.

IntraQ Portable Pedestal staff reduction example: One staff per two units and pedestals can easily be moved/re-positioned based on crowd volume.

IntraQ Pedestal Features

- Validates all types of 1D/2D printed and digital (mobile phone) barcodes, including wristbands; option to add other media readers such as RFID/NFC and magstripe
- Intuitive for guests; highly responsive validation – can accommodate up to 30 validations per minute
- Color displays provide customizable visual instructions for guests; a touchscreen interface allows operator to access administrator functions
- LED lights on the rear of the device notify attendants of presented credential status
- Allows customized screen graphics and sound files to be associated with presented credential status

Available Options

Over a dozen available options, including:

- RFID / NFC reader
- Magstripe reader
- Variety of powder coated colors
- Removable dolly for easy deployment

Typical Installation Sites

- Stadiums and Arenas
- Performing Arts Centers
- Temporary Events (i.e. Festivals, Conventions)

Flexible Scanning Options

Guests self-scan their preferred media type for touch-free entry.
