

Optical Admission Turnstile

Self-Validation Applications

The IntraQ-SU5000 is Alvarado's newest intelligent admission device. When a guest presents a valid entry credential, the motorized panels open away from the guest, providing a clear path for quick entry. Highly engineered optical sensors track guests as they pass through the turnstiles and detect persons attempting to tailgate on the entry.

Product Benefits

- Provides touchless entry for guests
- Provides very fast throughput
- Frees ticket takers to greet guests and watch for possible security threats
- Panel etching and illumination options provide branding opportunities
- Can match finish to team or venue colors

Product Features

| | |
|--|--|
|  Media Validation | Validates all types of 1D/2D printed & digital (mobile phone) barcodes, including wristbands; option to add other readers such as RFID/NFC |
|  Fast Entry Throughput | Intuitive for guests; can accommodate up to 30 validations per minute |
|  TFT Touchscreen Display | Easily change guest instruction graphics, venues logos or advertising; supervisors access administrative functions via touchscreen |
|  Superior Tailgate Detection | Integrated optical sensors detect invalid or unauthorized passage attempts |
|  Communication | TCP/IP based, wired or optional wireless communication (802.11a,b/n) |
|  ADA Passage Widths | Optional cabinet widths allow for disabled access |

IntraQ-SU5000: The Latest Technology for Venues

With an elegant, upscale design and touchless entry for guests, the IntraQ-SU5000 provides the latest in access technology for sports and entertainment venues.

Available Passage Widths

- Standard 28" wide passageway
- ADA 36" wide passageway

Common Applications

- Guest self-validation of access credentials
- Where the security of a barrier turnstile is desired
- Exclusive / VIP area access

Typical Indoor Installation Sites

- Theme and water parks
- Stadiums and arenas
- Zoos, aquariums and museums

Available Options

- Many available options, including:
- RFID/NFC reader
- Wi-Fi communication (802.11a,b/n)
- Panel illumination in team or venue colors
- Logo etching on the moving or side panels
- Two standard panel sizes (35" and 46")
- Custom cabinet colors
- Floor saver platforms

Ticketing System Integration

The IntraQ-SU5000 works seamlessly with Alvarado's widely used GateLink10 admission control software; also provides direct plug and play connections to widely used ticketing/access systems such as Ticketmaster Presence.

Fire System Integration

The IntraQ-SU5000 integrates easily to facility fire systems. Panels open and stay open to provide a clear passageway.

GateUtility

As an added benefit, the IntraQ-SU5000 and all of Alvarado's intelligent admission products come with GateUtility (GU). This browser-based application provides remote control of all Alvarado devices installed at a facility. For example, using any browser accessible device, GU allows the facility to:

- Change screen graphics and sound files
- Change turnstile operational modes
- Open individual (or all) turnstile barriers to provide a clear passageway during or after event
- Update software and device configurations
